

Course Outline

BABS1111/GENS1111

Big Fat Myths

School of Biotechnology and Biomolecular
Sciences
Faculty of Science

Term 1, 2021

1. Staff

Position	Name	Contact Details
Course Convenor	Dr Nirmani Wijenayake	bfm@unsw.edu.au

2. Course information

NB: Some of this information is available on the [UNSW Handbook](#)¹

Year of Delivery	2021
Course Code	BABS1111 and GENS1111
Course Name	Big Fat Myths
Location	Wholly online
Lesson and Quiz times	Wholly online, work through as you wish before given deadlines.
Academic Unit	BABS, School of Biotechnology and Biomolecular Sciences
Level of Course	UG
Units of Credit	6 UOC
Session(s) offered	Term 1 and Term 3
Assumed Knowledge	Nil prior knowledge assumed, but an enthusiasm to understand how our body works and to learn about the amazing discoveries that have led to our current understanding of human metabolism and physiology will be an advantage in this course.
Prerequisites or Co-requisites	-
Exclusions	Note: Students enrolled in a Faculty of Science program should not take GENS1111 as a general education course, but can enrol in the equivalent course, BABS1111 using the course as one of their science electives.
Hours per week	6
Number of Weeks	10
Commencement Date	15 th of February 2021

¹ UNSW Handbook: <https://www.handbook.unsw.edu.au/>

2.1 Course summary

Weight loss fads in the form of diets and exercise regimes (with mostly unrealistic claims) are ubiquitous in modern day life; however, there is surprising ignorance and confusion about how we lose weight, with most people unable to answer the simplest question: when you lose weight, where does the fat go? Popular (incorrect) answers include energy, heat, faeces and sweat. Surprisingly, this question has also baffled health professionals including general practitioners, dietitians and professional trainers.

This course will lift the veil on weight loss by tracing every atom you eat into and out of your body, and you will learn the fate of fat during weight loss, that is, it is converted to carbon dioxide and water and exits your body mainly through your lungs. Along the way, you will also learn how humans convert foods into useful energy, what exactly is happening in your bodies during weight loss and weight gain, and by the end you will be able to critically examine popular weight loss claims as well as your own diet and lifestyle. Diet myths and wellness nonsense topple like dominoes along the way.

No prior scientific knowledge is assumed as we aim to provide you with the knowledge to answer this big, fat myth.

2.2 Course aims

- This course will introduce students to basic modern biochemistry principles that natural philosophers (what we now call scientists!) have worked hard over hundreds of years to understand how we, as humans, convert foods to useful energy. Particular focus is on the metabolic processes of weight loss and weight gain and how we store this energy when there is excess (think couch potato) and how we utilise it in times of deficiency (exercise, weight loss and sadly, starvation).
- In doing so, students will dispel current myths on weight loss and weight gain, restoring their confidence in the age-old wisdom that to lose weight, you simply need to eat less and move more.

2.3 Course learning outcomes (CLOs)

On completion of this course, you (the successful student) will be able to:

1. Recognise and describe the history of science that has led to our current understanding of human metabolism.
2. Explain how weight loss occurs by eating less, moving more, or a combination of both, and how weight gain occurs by doing the opposite.
3. Describe what fat is using the five-level body composition model.
4. Describe and explain metabolism as the conversion of food into useful energy by digestion, absorption and respiration.
5. Prepare an exercise and food journal to analyse, evaluate and reflect on your own and others diet and lifestyle behaviours.
6. Appraise and assess popular weight loss claims and diet myths.

2.4 Relationship between course and program learning outcomes and assessments

Course Learning Outcome (CLO)	LO Statement	Related Tasks & Assessment
CLO 1	Recognise and describe the history of science that has led to our current understanding of human metabolism	Lecture Assessments, Online Lesson Examination
CLO 2	Explain how weight loss occurs by eating less, moving more, or a combination of both, and how weight gain occurs by doing the opposite	Lecture Assessments, Weight Loss Method Critique, Food and Exercise Journal, Online Lesson Examination
CLO 3	Describe what fat is using the five-level body composition model	Lecture Assessments, Online Lesson Examination
CLO 4	Describe and explain metabolism as the conversion of food into useful energy by digestion, absorption and respiration	Lecture Assessments, Food and Exercise Journal, Online Lesson Examination
CLO 5	Prepare an exercise and food journal to analyse, evaluate and reflect on your own and others diet and lifestyle behaviours	Lecture Assessments, Food and Exercise Journal, Online Lesson Examination
CLO 6	Appraise and assess popular weight loss claims and diet myths	Lecture Assessments, Weight Loss Method Critique, Online Lesson Examination

3. Strategies and approaches to learning

3.1 Learning and teaching activities

Throughout the course, students are encouraged to critically evaluate concepts and ideas by encouraging questioning and self-directed learning by participating in all online activities including online lessons and quizzes.

The course highlights the link between theory and practise with learning activities on biochemical theory complementing the case studies and everyday scenarios learning in the online lessons. Learning and assessment activities identify students' misconceptions and preconceptions on the course topic (myth busting) and use a variety of real-world examples of human's diet and exercise to illustrate key ideas and encourage students to draw on their prior knowledge.

3.2 Expectations of students

- To pass the course you must attempt, complete, and pass all the assessable components of the course.
- You are expected to be comprehensive and punctual in completing all online modules. The online lessons and activities aim to inspire and motivate students to explore the course subject further by providing numerous optional course material and links to additional learning resources.
- The course has a Microsoft Teams site set up to promote interactions between students. You will be added to the Teams site in Week 1. Microsoft Teams will be used for group communication for the group project so every student must access and interact with their group on Teams ever week. More information about this will be given to you in Week 1.
- If you have course-related questions, you are encouraged to use Microsoft Teams or the discussion forum on the course's Moodle website. These are monitored regularly. If more help is needed, you may send enquiries to the course email address (bfm@unsw.edu.au) or requests for appointments from your UNSW email. **When sending an email to the course coordinator, you must state your name, student number and the course you are enrolled in.**
- If you are worried about your progress or the performance in the course, please consult with the course authority as soon as possible. If you are struggling with an assignment or can't complete a task on time, contact Nirmani immediately so we can come up with a solution.

4. Course schedule and structure

Week (<i>Begins</i>)	Content	Assessment
Week 1 (15 February)	<ul style="list-style-type: none"> • Course Introduction and Expectations • Lesson 1: Fat Limits • Week 1 Reading • Week 1 Teams Activities 	
Week 2 (22 February)	<ul style="list-style-type: none"> • Lesson 2: History of Weight Loss • Lesson 3: What is Fat? (atoms and molecules) • Week 2 Reading • Week 2 Teams Activities 	
Week 3 (1 March)	<ul style="list-style-type: none"> • Lesson 4: What is Fat? (cells to whole body) • Lesson 5: Digestion and Absorption I • Week 3 Reading • Week 3 Teams Activities 	
Week 4 (8 March)	<ul style="list-style-type: none"> • Lesson 6: Digestion and Absorption II • Lesson 7: Food as Energy • Week 4 Reading • Week 4 Teams Activities 	
Week 5 (15 March)	<ul style="list-style-type: none"> • Lesson 8: Metabolism • Lesson 9: Eat Less or Move More • Week 5 Reading • Week 5 Teams Activities 	
Week 6 (22 March)	FLEXIBILITY WEEK	Assessment 1 Food and Exercise Journal Analysis (Due: Wednesday 24 th of March at 11.59 PM)
Week 7 (29 March)	<ul style="list-style-type: none"> • Lesson 10: How to read health news • Week 7 Reading • Week 7 Teams Activities 	
Week 8 (5 April)	<ul style="list-style-type: none"> • Week 8 Teams Activities 	Exam (Due: Wednesday 7 th of April at 2.00 PM)
Week 9 (12 April)	<ul style="list-style-type: none"> • Week 9 Teams Activities 	
Week 10 (19 April)	<ul style="list-style-type: none"> • Week 10 Teams Activities 	Assessment 2 Weight loss method critique video (Due: Wednesday 21 st of April at 11.59 PM)

5. Assessment

5.1 Assessment tasks

You must **complete and pass ALL the assessable components** seen below to pass the course.

Assessment Task	Description	Weight	Due Date
Online lessons (Formative)	INDIVIDUAL Weekly Moodle lessons that include multiple choice questions. Requires completion of entire lesson which includes multiple-choice questions to pass the course. The score you get for the lesson does not matter. However, if you do not do well with the quizzes, it would be good to go through the lessons again. The exam will be based on the information from these lessons and the weekly readings.	0%	All the lessons must be completed by Week 10.
Assessment 1: Food and Exercise Journal Analysis	INDIVIDUAL Analyse an assigned food and exercise journal and write a reflective essay about the findings.	35%	Due: Wednesday 24 th of March at 11.59 PM
Exam	INDIVIDUAL Covers all the lessons and compulsory reading material. The exam consists of multiple-choice questions and long response questions.	30%	Due: Wednesday 7 th of April at 2.00 PM
Assessment 2: Weight loss method critique	GROUP As a group of 3-4 students you are required to create a <i>pro-science</i> video to debunk two weight loss methods.	35%	Due: Wednesday 21 st of April at 11.59 PM

Please check the Assessment sections on Moodle for more information on Assessment 1 and 2.

- UNSW assessment policy: <https://student.unsw.edu.au/assessment>

5.2 Assessment criteria and standards

The major components of this course are the contents delivered through online lessons. This will be assessed by an exam and two assessments. More details on the assessment tasks and how they will be graded will be provided during the course (online via Moodle).

5.3 Submission of assessment tasks

Assignment submission

All assignments will be submitted online via Moodle. More details on assignment submission, deadlines will be provided on Moodle.

Any assessment task that is submitted after the due date will have a late penalty applied to them. **Late submissions will incur a 10% decrease in the overall mark per day.** Any assignments handed in more than 7 days late will not be marked. Extensions required due to unforeseeable circumstances must be arranged at least 3-5 days prior to the due date. If you are struggling to complete your assessments for whatever reason, please contact the course coordinator immediately.

Late Submissions of Assignments

Instructions for Assignments are available from the start of the Term. You should be planning to complete them well before the deadlines. If you are unable to complete the assignments by the due submission day and time, you must contact Nirmani (bfm@unsw.edu.au) at least 4 days prior to the due date and provide a medical certificate or other professional documentation that supports the reason for your inability to complete the Assignment. Note that a **10% penalty per day** will ensue if you do not provide a satisfactory explanation. Please note that, if you ask for special consideration for a task that has been available for completion weeks in advance, the day before it is due, no consideration will be granted.

If you are struggling with the assignment, unsure how to start or need help in anyway, you can contact Nirmani at any time to seek help. Please do this in advance so she can arrange to help you.

Special Consideration for missed Quizzes

If you are unwell on the day of the exam or were unable to attempt the exam for a reason out of your control, you need to contact Nirmani within 2 days of the exam with evidence for your absence. If you can provide supporting documentation for your absence, an alternate supplementary assessment will be provided within 2 weeks of the original exam. If you are feeling unwell or are unfit to sit the exam, do not attempt the exam. Instead contact Nirmani within two days of the exam with proper documentation to support your inability to sit the exam. You will then be given the chance to sit a supplementary exam. Under UNSW's fit to sit policy you will not be allowed a supplementary exam if you already attempted the exam.

DSU Students:

If you are a student registered with the DSU, you may be eligible for some extensions for the two assessments. Please email your supporting letter by the end of Week 1 so we can discuss what provisions will be available for you.

5.4. Feedback on assessment

Students will receive constructive feedback on their assignments in a timely manner (within 2 weeks after submissions as instructed in the UNSW assessment Policy). The delivery method of feedback may vary depending on the assessment type. Full details will be provided on the course Moodle site.

6. Academic integrity, referencing and plagiarism

Academic integrity is fundamental to success at university. Academic integrity can be defined as a commitment to six fundamental values in academic pursuits: honesty, trust, fairness, respect, responsibility and courage.¹ At UNSW, this means that your work must be your own, and others' ideas should be appropriately acknowledged. If you don't follow these rules, plagiarism may be detected in your work.

Further information about academic integrity and **plagiarism** can be located at:

- The *Current Students* site <https://student.unsw.edu.au/plagiarism>, and
- The *ELISE* training site <http://subjectguides.library.unsw.edu.au/elise/presenting>

The *Conduct and Integrity Unit* provides further resources to assist you to understand your conduct obligations as a student: <https://student.unsw.edu.au/conduct>.

7. Readings and resources

There are no required readings for this course. All resources are online and provided in the online lessons or as web links within Smart Sparrow or on Moodle.

A useful resource for this course is the book, *Big Fat Myths*¹, which the course was based on.
